

Running a virus scan on DFE Geobook Laptops

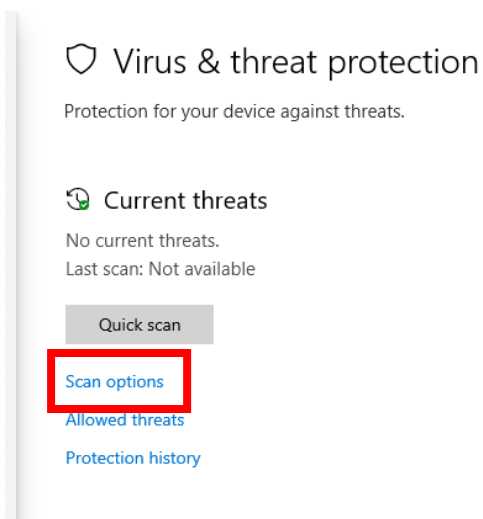

- Start up the laptop and double click on the Windows Defender icon on the taskbar. (You may need to click on the arrow)

- Click on “Virus & Threat Protection”.

- Click on “Scan options”

- Check the box for “Full Scan” and then click on “Scan now” and wait for the scan to complete.

Quick scan

Checks folders in your system where threats are commonly found.

Full scan

Checks all files and running programs on your hard disk. This scan could take longer than one hour.

Custom scan

Choose which files and locations you want to check.

Microsoft Defender Offline scan

Some malicious software can be particularly difficult to remove from your device. Microsoft Defender Offline can help find and remove them using up to date threat definitions. This will restart your device and will take about 15 minutes.

Scan now

This scan can take some time to complete so it would need to be left running. If something is picked up on the scan you will be informed on screen. If this is the case, power down the laptop immediately and contact a member of Woodlands ICT by emailing ict@woodlands.school or ringing 01939 232372 and selecting option 3.
